TO ORDER PLEASE SPECIFY THE FOLLOWING
1. Flange Specification
   (ANSI/ASME, API, MSS SP44, BSI or Din Standard)
2. Nominal Pipe Size, Pressure Rating and Bore Size
3. Operating Pressure, Temperature and Media
4. Isolating Sleeve Material
5. Isolating Washer Material
6. Metal Washer Material (SS/Zinc Steel)

OTHER PRODUCTS AVAILABLE
- Standard Isolating Gasket Kits
- Kleerband® Flange Protectors
- Radolid® Nut & Bolt Protector Caps
- Casing Spacers and End Seals
- Innerlynx® Modular Mechanical Seals
- Iso-Joint® Monolithic Isolating Joints
- Foreman Nite Caps - temporary pipe plugs
- UBolt-Cote® and Atlas Pipe Support® Pads

The Integra SSA® Cathodic Isolation Gasket is manufactured from proprietary G-FORCE 2000®, a special glass epoxy material with an impressively high compression strength; these materials are proprietary materials produced only for Advance Products & Systems.

This APS-exclusive gasket has an excellent mechanical strength as well as dynamic electrical isolating properties allowing it to perform efficiently and effectively in severe service applications under extreme pressures and elevated temperatures. Integra SSA® gaskets provide an outstanding sealing capability while installed in extremely high pressure applications; it can be installed in flanges from ANSI 150# to ANSI 2500# up to an API 10,000# flange. Integra SSA® gaskets have excellent electrical properties while at elevated temperatures. During mechanical operations, Integra SSA® gaskets can operate at 400°F.

Inserted in the gasket is a glass-reinforced, spring energized PTFE seal to assist in maintaining a high pressure, chemically resistant seal within the flange. Incorporated within the PTFE seal, a 316 stainless steel coil spring provides additional compression with minimal cold flow. These characteristics allow constant pressure to be applied, with low cold flow characteristics ultimately providing an outstanding seal and cathodically isolating the flange for superior reliability.

Integra SSA® gaskets are manufactured to accommodate RTJ, full and raised face flanges. All kit components include either G-10 or Mylar sleeves and G-10 isolating washers when Integra SSA® gaskets are installed.

**FEATURES & BENEFITS:**

- Electrically isolates effectively for all pipeline and piping applications.
- Ensures a stringent seal in volatile applications.
- ANSI 150# up to API 10,000# ratings.
- The gasket is designed for severe pressure and temperature applications.
- Composition is of proprietary G-Force 2000® material with a compressive strength of 91,000 PSI.
- Stainless Steel Spring-fortified PTFE seal uses a glass reinforced PTFE with low cold flow characteristics. Also available in Viton.
- These gaskets are constructed from an extremely high compressive strength material formulated for high temperatures. Integra SSA® gaskets are manufactured in 1/4 inch thick material.
- APS Integra SSA® gaskets have no metal core substrate material as part of its sealing and mechanical application.

**VERSATILITY**

Mismatched and misaligned flanges are easily sealed with the Integra SSA®.

**SEVERE SERVICE CATHODIC ISOLATION**

When used with isolating sleeves and washers, the Integra SSA® is effective in eliminating electrical conductivity and also in preventing corrosion that results from contact between two dissimilar metals.

The strength and reliability of the Integra SSA® makes it a perfect replacement for a missing or faulty RTJ gasket.

**G-FORCE 2000® Material**

G-Force 2000® material is a flat epoxy laminate woven glass material. The continuous operating temperature is 400°F, 204°C in mechanical applications. This material meets NEMA Fiberglass and MIL-1-24768/3, Type GEB. Material Tested: 0.250 thickness.
